## S02 - ILL005

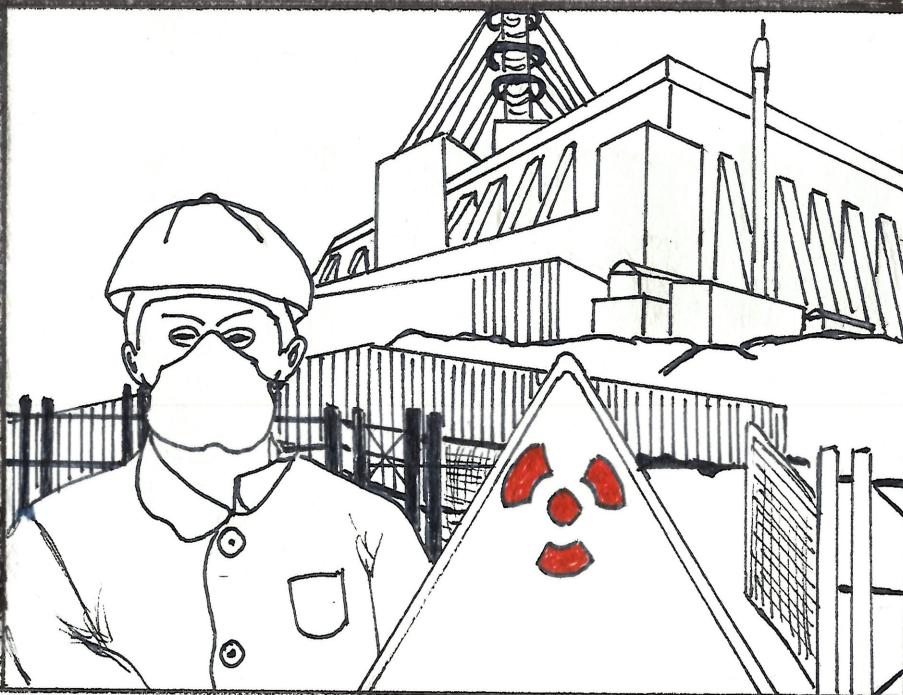

26 septembre - 2h30

Un important incendie s'est déclaré dans une usine à Rouen, provoquant des explosions.

26 avril 1986 - 1h23

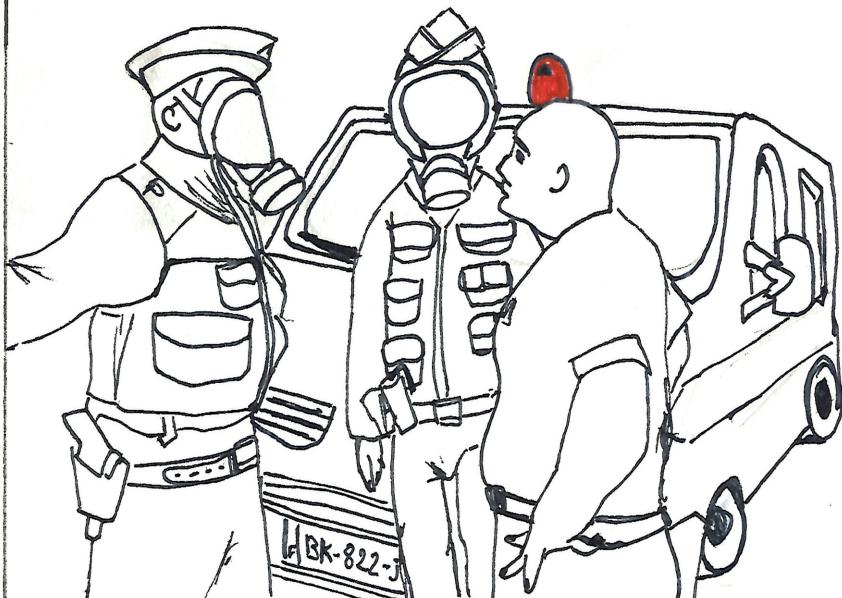

Le réacteur numéro 4 de la centrale de Tchernobyl explose

## S02 - ILL005

26 septembre - 11:00

Le préfet de Normandie, Pierre André-Durand a assuré que les analyses démontrent un "état habituel de la qualité de l'air"

2 mai 1986 - Le professeur Pellerin prévient que les "prises préventives d'iode me sont mal justifiées, mi opportunes. Le 30 avril, une présentatrice annonce dans un bulletin météo que la France est protégée par l'anticyclone.

## S02 - ILL005

Le 26 septembre, l'Etat recommande :

- aux agriculteurs de ne pas récolter leur production.
- aux éleveurs, de rentrer les bêtes et sécuriser leur alimentations et abreuvoirs
- aux particuliers, de ne pas manger leurs légumes

QUELLES SERONT LES RETOMBÉS ...

En France, officiellement, Tchernobyl n'a eu aucune conséquence sanitaire. Une enquête italienne montre que la catastrophe serait responsable d'une hausse du nombre de cancer de la thyroïde.
